| 2026 - Today | <b>Redis   Senior Automation Engineer</b> <ul style="list-style-type: none"><li>Built a Playwright E2E automation framework for Redis Cloud Terraform provider, achieving 90% resource coverage and establishing a CI/CD pipeline.</li><li>Refactored authentication in the Redis Cloud API test framework, eliminating redundant token generation and reducing total API requests by 60%.</li><li>Authored custom Claude and Codex skills and trained the automation team on optimal agentic workflows and token-cost efficiency.</li><li>Migrated 40+ UI tests to API, reducing regression flakiness and accelerating feedback cycles.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2020 - 2026  | <b>Vimeo   Principal QA Automation Engineer</b> <ul style="list-style-type: none"><li>Built an AI-powered framework, validating perceptual similarity between editor and backend-rendered videos, eliminating manual regression testing.</li><li>Developed a Python BDD E2E test framework, covering 100+ core scenarios across CI/Stage/Production, automating 70% of manual API regression tests.</li><li>Developed Unit, Integration, and API test frameworks, authoring 800+ tests that increased code coverage by 20%-30% for backend services.</li><li>Developed a TypeScript Playwright GUI framework, leveraging the Page Object Model design pattern.</li><li>Built a data-driven video rendering tool from CSV inputs, saving 8 hours of manual testing effort weekly.</li><li>Optimized CI/CD quality gates via selective test execution, cutting feedback time from 10 to 1-4 minutes.</li><li>Containerized test automation dependencies via Docker for consistent execution across CI/CD pipelines.</li><li>Conducted QA technical interviews and onboarded team members on test automation best practices.</li></ul> |
| 2017 - 2020  | <b>Yedioth Information Technology   QA Automation &amp; Performance</b> <ul style="list-style-type: none"><li>Built a Python REST API test automation framework for Ynet, YnetNews, and Calcalist backend services.</li><li>Implemented a Python GUI automation framework using Selenium, saving 9 hours of weekly regression testing for CMS and websites.</li><li>Executed and analyzed performance tests using JMeter, ensuring high-traffic site stability.</li><li>Designed and executed manual test plans for new features across internal and external web products.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Skills & Technical Tools

|                 |                                                                       |
|-----------------|-----------------------------------------------------------------------|
| AI              | Claude Code, Codex, Augment, Gemini, Agentic Skills and MCPs.         |
| Cloud & Infra   | AWS(EC2, S3, Route53, VPC, Transit Gateway), GCP, Terraform and Env0. |
| OS              | Windows, Linux, MacOS, iOS and Android.                               |
| Programming     | Python, TypeScript, JavaScript, HTML and CSS.                         |
| Automation      | Pytest, Playwright, Selenium, Mocha, WebdriverIO, Gherkin and JMeter. |
| API & Network   | Postman, Bruno, Charles, Wireshark, Fiddler and Browser DevTools.     |
| CI/CD           | Kubernetes, Docker, GitHub Actions and Jenkins.                       |
| Version Control | Git, GitHub and GitLab.                                               |
| Monitoring      | Splunk, Datadog, Google Log Explorer and Grafana.                     |
| QA Management   | ReportPortal, Jira, Confluence, Qase and TestRail.                    |
| Databases       | NoSQL, MS-SQL, MySQL, Oracle DB and Redis(Cloud & Enterprise).        |
| Languages       | Hebrew(Native) and English(Fluent).                                   |

Education

|      |                                                                   |
